

## The SeniorMouse

The SeniorMouse's shape and functionality are especially designed for people with age-related motor skill limitations.

- *The shape of the SeniorMouse ensures a secure grip.*
- *Trembling is counterbalanced so uncontrollable movements do not affect the mouse pointer.*
- *Cursor holds its place when the hand removed from the mouse to press the mouse button.*

Unlike a traditional computer mouse, the SeniorMouse is shaped to fit the curvature of your hand, ensuring a secure grip. Trembling is counterbalanced so uncontrollable movements do not affect the mouse pointer. The cursor holds its place even when you remove your hand from the mouse to use the mouse keys.

### Prerequisites:

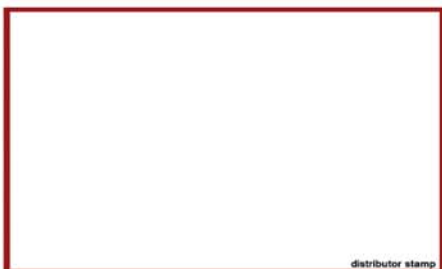

Windows 98SE, 2000, XP or Vista. Mac operating systems also supported.

### Technical specifications:

Size: 195 mm x 135 mm (7,7" x 5,3")

Interface: USB

Order #: 50840

### Setup:

Connect the SeniorMouse to a USB port on your PC or laptop. No software or drivers need to be installed. The mouse will be automatically detected and ready for use.
