

The Blue Mouse

The shape and function of the BlueMouse enables the simple usage of a PC for all those with motor skill limitations, such as those caused by paralysis.

- *The Blue Mouse enables a secure grip and reliable control due to its ergonomic shape.*
- *Trembling is counterbalanced so uncontrollable movements do not affect the mouse pointer.*
- *The cursor holds its place when the hand is removed from the mouse to press the mouse button.*

An integrated electronic magnet and a magnetic mouse pad ensure that the Blue Mouse always grips the mouse pad and can be used by patients with a strong tremor or who have limited motor skills. The BlueMouse features a right and left mouse button with the same functions as a conventional computer mouse. A third button replaces a double click – which can be challenging for those with physical disabilities. Unintentional movements are thus not translated into actions when the hand moves the mouse to press the mouse button. Reaction times can be configured individually. The BlueMouse is suitable for quadriplegics with partial arm functions and patients suffering from Parkinson's.

Order #: 50850

Setup:

The BlueMouse easily connects to a PC or Notebook via a USB port. No software or drivers are necessary. The mouse will be recognized automatically and ready for use.

Requirements:

Windows 98SE, 2000, XP or Vista. Mac operating systems also supported.

Technical Specifications:

Dimensions: 19.5 cm x 13.5 cm (7.7" x 5.3")

Connection: USB
